## TO WHOM IT MAY CONCERN:

Re: Jim Cochran  
15 South 4th East  
Heber City, Utah 84032

Mr. Jim Cochran was first seen by me on January 3rd 1966 presenting a history of intermittent low back pain for past five years. Now pain is radiating into left hip and occasionally into left knee. The pain is aggravated with cold weather and increased activity. Pain decreased with massage, application of heat etc.

Family history: Father has severe Rheumatoid Spondylitis.

Physical examination shows pain <sup>at</sup> left sciatic notch.  
X-ray reveals decrease at L<sub>5</sub>-S<sub>1</sub> interspace.  
CBC: Hgb. 15.6, WBC 9,400, Ht. 49, ESR 4, R.A. Negative.

Impression: 1 - Disc  
2 - Cannot rule out Early Rheumatoid Arthritis of spine.

As of this date - September 16th 1966 - Mr. Cochran is still having intermittent mild back pain.

Prognosis: Will probably continue to have the same problems as now throughout the rest of his life.

Sincerely,

J.D. Boggess, M.D.

TO WHOM IT MAY CONCERN:

Re: Mr. Cookman  
15 South 1st East  
Heber City, Utah 84302

Mr. Jim Cookman was first seen by me on January 3rd 1966 presenting a history of intermittent low back pain for past five years. Now pain is radiating into left hip and occasionally into left knee. The pain is aggravated with cold weather and increased activity. Pain decreased with massage, application of heat etc.

Family history: Father has severe rheumatoid arthritis.

Physical examination shows pain on left sacral nerve.  
X-ray reveals decrease of L4, L5, interspaces.  
CBC: Hgb. 15.5, WBC 9,100, Hct. 45, ESR 12, R.A. Negative.

Impression: 1 - None  
2 - Cannot rule out early rheumatoid arthritis of spine.

As of this date - September 10th 1966 - Mr. Cookman is still having intermittent mild back pain.

Prognosis: Will probably continue to have the same problem as now throughout the rest of his life.

Sincerely,

J. D. Boggs, M.D.
